PROJECT

1. Hostel Management System Using PHP, HTML, CSS

- This is a web base project which is combination of Backend and Frontend languages. We are trying to manage hostel student record. In this project we are mainly focus is student can register for the hostel room if room available than admin allocate room. I and my friend work together to make this project.

2. R&D website Using PHP, HTML, Tailwind CSS, jQuery

- This project mainly based on faculty. In our website release some project. First faculty choose a project and register on that then admin are allocate project according to degree after allocate project the faculty submit research paper on that project with a specific deadline when deadline is over the close that project. There a main feature is mail transfer.

3. Chat App using MARN Stack

- This is a chat app using MARN. I am work on Backend part. Here I Work on Node Environment under. We use some packages express, mongoose, socketed, jwt etc.
